

Testboy® 25

cable tracer set

The Testboy 25 is a cable detector that simplifies searching for cables in walls and cable ducts. The depth to which the Testboy 25 can detect depends on the composition of the wall (for example, brick, plaster, concrete).

A lined case with belt loop is included in the range of supply. It is suitable for reliably and safely transporting both devices.

Your advantages: - 3 year manufacturer's guarantee
- TÜV / GS tested and approved
IEC/EN 61010-1, DIN VDE 0411

A carrier signal from the transmitter is modulated either by means of the alligator clips or the modular connector to one end of the cable. This allows the other end of the cable to be found quickly and precisely with the receiver without contact or having to strip the insulation of the cable.

The Testboy 25 can exactly identify the single two-core cable (for example in telecommunications technology).

As well as being equipped with a socket for earphones for working in loud surroundings, the sensitivity of the easy-to-use receiver is infinitely adjustable. The transmitter can optionally transmit either a continuous or alternating tone. The integrated continuity tester detects short-circuits quickly and reliably.

Technical Details	Testboy 25
Display	acoustical
Power Supply	2 x 9V block
Dimensions	230 x 55 x 23 mm (receiver) 55 x 57 x 23 mm (generator)
Weight	244g
Colour	red, other colour on request
Scope of Delivery	1x operating instructions 1x generator 1x receiver 2x battery 9V block 1x readiness bag
